# The Problem

80%

**A token System for doctor appointment with queue management in web/mobile**

**of patients would be less annoyed if they know how long the wait time would be**

# Why do we need a token management system ?

- Reduces Cost
- Streamlines Workflow
- Reduce Walkaways

# Why do we need a token management System

- Create a good experience

no crowd

- Reduces Anxiety

Whether they would get a doctor

- Improving Transparency

patients doubt cleared.

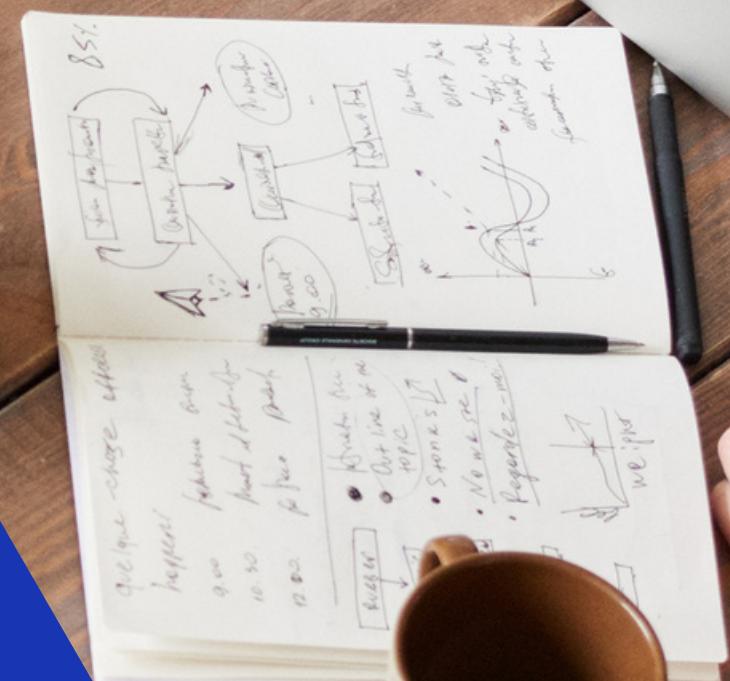

A photograph of a person's hands working at a wooden desk. On the desk is a laptop displaying a presentation slide titled "Discussion Outline" with "TODAY'S HIGHLIGHTS" and a "Brief introduction", "Strategic planning", "Marketing plan", etc. A tablet next to it shows a blue screen with "85.00%" and some text. A smartphone lies on a teal notebook. A small potted plant sits on the left, and a cup of coffee is on the right. A white mug is also visible.

# STACK USED

- Programing Language : Python
- Server : Mysql

# What we Built

A program that takes patient details as input, store these details in a database and generate a token for the patients

# To be included

- ◆ Time of Consultation
- ◆ Alarming System
- ◆ Updating token in an emergency

# To be Included

- ◆ Doctor and Department wise diagnosis
- ◆ Bill Payment
- ◆ Prioritising people
